

G10 Macro Rates Strategy

Blending experience, proprietary technologies and implementation efficiency to create alpha

The G10 Macro Rates Strategy is an interest rate and FX macro strategy, implemented in a relative value style, aiming to deliver positive returns with a low correlation to equity and bond markets. The strategy is managed by a highly experienced team, with an outstanding track record of managing liquid diversified strategies. The team applies an established and disciplined investment process with a focus on implementation efficiency, centred around a G10 mandate.

Specialists in relative value trading of G10 interest rates and FX

The investment team comprises of highly experienced portfolio managers Shayne Dunlap and Dr Richard Marshall, alongside co-portfolio manager Oleg Gustap, all of whom worked most recently at Aberdeen Standard Investments. Prior to 2015 Shayne and Richard worked together for over 15 years at Mizuho on the bank's proprietary trading desk. The team specialise in relative value trading of G10 interest rates and FX.

Shayne Dunlap and Dr Richard Marshall have worked together for over 19 years.

Highly experienced team with over 50 years' combined investment experience managing liquid diversified strategies

Dr Richard Marshall

Oleg Gustap

Outstanding track record of producing uncorrelated, positive returns

Shayne Dunlap and Dr Richard Marshall were managers of a G10 Rates & FX strategy between December 2006 and July 2015, before managing an ARGBF strategy from September 2015 to December 2017 with Oleg Gustap.

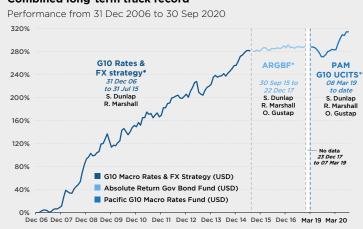

Over this period the strategy achieved positive net returns every year, including 2008.

Past performance is not indicative of future performance. Performance is provided net of fees.

- *Fees calculated using following structure = 0.8% OCF (0.3% AMC
- + additional charges) and 10% performance fee.
- ** **Fees calculated using OCF of 0.88%.

Combined long-term track record

Our three major investment principles:

Craft investing not forecasting investing

Data has become industrialised. Macro investing should not be about guess work but a process of crafting a well researched portfolio of asymmetric trades with disciplined risk management.

Focus on implementation efficiency

We use common data and focus on implementation efficiency. Our proprietary curve model generator provides superior analysis to identify market (mis)pricing and exploit inefficiencies.

Positively convex returns

We constantly search for value forms of proxy volatility and asymmetric trades, prioritising capital preservation. Historically proven to deliver uncorrelated returns in extreme market conditions.

Investment process

The G10 Macro Rates Strategy process combines proprietary technologies and implementation efficiency to create alpha

- Macro data has become industrialised and easily available, the team use common data to identify the drivers of global growth.
- The team extensively research the effect of these global drivers on five global liquidity pools. This focus enforces diversification and discipline.
- To truly understand the path of rates and identify market (mis)pricing the team use their own proprietary curve model generator. Standard curve models are often not accurate enough to exploit inefficiencies.
- Trades are designed with a minimum 2:1 upside ratio and subjected to extensive backtesting and validation.
- Risk management is embedded throughout the investment process and underpins the team's disciplined approach to implementation efficiency.

Step 1	Define global macro environment Identify drivers of global growth	
Step 2	Examine five global liquidity pools Evaluate the effects of global drivers on liquidity pools	
Step 3	Market analysis Identify market (mis) pricing, exploit inefficiencies	
Step 4	Trade generation Combine macro and market analysis	V
Step 5	Portfolio construction Focus on simple, liquid and diversified structures	V
Every Step	Risk management Integrated throughout the process	

Diversified, liquid portfolio of 20-30 trades, highly uncorrelated to traditional markets

Liquid and diversified portfolio

Liquidity is of vital importance. The team only trade the most liquid G10 instruments and monitor them on a daily basis to ensure the portfolio remains within expected parameters.

Diversification is key in portfolio construction. New trades are tested for additional risk contribution. Stoploss limits and profit targets are set for all individual trades and complemented by active VAR management.

Risk models and framework are run daily, automated and independent from the fund management team.

Diversified

Strategy overview
