The Funds investment objective is to provide capital growth over the long term whilst attempting to limit the risk of capital loss, the Fund will have a balance of capital protection and equity market exposure.

### Fund manager commentary

Macroeconomic data continued to show resilience in March, particularly in the US. This data pushed back the expected interest rate cutting cycle in the US to later in the second half of the year. Surveys-based measures of activity, such as the ISM Services Index that printed at 52, still show the US economy in expansionary territory. Labour markets and consumer spending data also support this view.

Equity returns were once again strong over the month, with global equities gaining over 3% in sterling terms. Performance was broad based, with UK equities being the strongest regional mover after a period of underperformance. Within US Equities, our holding in a US Value ETF, which invests in undervalued stocks across the sectors of the US stock market, significantly outperformed the S&P 500.

Fixed Income markets were also positive over the month, with yields falling, despite stronger news on economic growth and inflation. Within fixed income a holding in UK Inflation-Linked Gilts added value, benefitting from the fall in yields and the increase in inflation expectations over the month.

Within Alternatives, our holdings in UK property rallied over the month. A holding in UK Commercial Property REIT, a closed-end fund that trades at a discount to net asset value and that has been the subject of a takeover proposal, rallied by 9.5%.

Diversifying assets once again provided returns that are uncorrelated with bond and equity markets. Holdings in the AQR Style Premia and Managed Futures funds, which utilise quantitative signals across Equity, Fixed Income, FX and Commodity markets generated strong returns, bringing their returns over the year to 21% and 11% respectively.
